

LANCE KYLE BENITO

Senior Solutions Architect | Technical Design Authority | Systems & Data Integration Specialist

ISO 27001:2022 · ISO/IEC 42001:2023 AI Governance · AWS · Azure · Immediately Available
Cape Town, South Africa · +27 81 344 3635 · lance.benito@outlook.com · linkedin.com/in/lance-benito-a6ab5b214

EXECUTIVE SUMMARY

Technical Design Authority with 19 years of technical IT expertise, including 15+ years specialising in the governance of data integrity, SaaS platforms, and enterprise regulatory compliance. Trusted escalation architect across global enterprises — Shell, Halliburton, TotalEnergies, Baker Hughes — responsible for forensic diagnostics, compliance governance, and crisis resolution at scale. At Powerfleet — a global operation spanning 125+ countries — elevated the North American support region from worst-ranked to #1 globally in under 12 months, formally recognised by Senior VP-level leadership as instrumental in that transformation.

Although formal job titles have varied over 19 years — Subject Matter Expert, Escalation Authority, Technical Design Authority — the underlying work has been solution-architecture in substance throughout: independently designing integration frameworks, standards, and governance models later adopted as organisational standard, well before “Architect” appeared in a job title. ISO 27001:2022 and ISO/IEC 42001:2023 certified. Proven record across compliance governance (FMCSA, DOT, IFTA, DTCO), enterprise data integration, and strategic platform transformation. Immediately available.

KEY IMPACT HIGHLIGHTS

- Worst to #1 Globally — Under 12 Months.** Transformed the North American support region from lowest-ranked to #1 globally through forensic RCA, structured diagnostic frameworks, and daily SQL analytics — recognised by Senior VP leadership as the defining force behind the turnaround.
- DOT Compliance Crisis Averted — 80,000+ Assets at Risk.** Sole analyst identifying a Rovi IV firmware sync malfunction exposing 80,000+ assets across Halliburton, Baker Hughes, and 120 enterprise clients to immediate DOT enforcement. Daily SQL forensic analysis directly informed both the Rovi firmware fix and the Fleet Manager UI software resolution — zero vehicles grounded.
- IFTA Compliance Report — 2-Person Build Deployed Enterprise-Wide.** Recalled as trusted escalation authority to co-architect the IFTA compliance report (2019/2020), initiated after the existing production report began generating inaccurate FMCSA submissions. Built the Excel import model and a 5-tier proactive classification system, personally verifying quarterly IFTA reports across 70+ NA clients from 2019–2025 with zero FMCSA penalty incurred. Later defined the full AWS S3 data specification, transitioning to automated ingestion across 100,000+ telematics units — the original build became the foundation for the full production system deployed enterprise-wide in 2025.
- 60M+ Annual Healthcare Claims Stabilised.** Governed real-time medical aid claims processing for Clicks (36M/yr) and Dis-Chem (24M/yr). On day one, independently diagnosed a novel temp-file overflow failure and engineered a fix adopted directly into the next production build.

CORE TECHNICAL TOOLSET

Forensic & SQL	SQL Server — Advanced Forensic Diagnostics & Validation (Diploma certified), Firebird SQL, MySQL, PowerShell, Linux, Python for Data Science
Cloud & Data	AWS Solution Architect (Associate), Azure Administrator, Azure Stream Analytics, S3
Governance	ISO 27001:2022 ISMS, ISO/IEC 42001:2023 AI Governance (AIMS), Digital Forensic Investigation, AI Governance & Ethics
Integration	XML/XSLT, CAN Bus / IoT telemetry, SaaS API platforms, SDLC governance, Flask (Python), SQLite, Salesforce (AI fundamentals)
Delivery	Jira (Architecture), Confluence (Global Admin), Agile/Scrum/Advanced Scrum, ITIL 4, SoapUI, Fiddler (QA automation & integration testing), Microsoft 365

PROFESSIONAL EXPERIENCE

Senior Solutions Architect · Orion Tracking

Apr 2026 – Present

- Architected and delivered a full enterprise-grade digital redesign of Orion Tracking's public platform — strategically repositioning the brand from commercial-tier to enterprise-tier, spanning information architecture, solution suite presentation (24/7 video monitoring, fleet management, vehicle tracking, fuel management), and SARS compliance positioning. Live enterprise clients include Fox Logistics, Sunbake, Task Tactical, APEX Security, and Global Elite.
- Specified and directed the AI-assisted delivery of a production-grade internal ticketing system from scratch — architecting the full solution blueprint and directing implementation, replacing a physical whiteboard and closing a complete operational gap. Defined all requirements, validated architectural decisions (repository pattern, service layer separation, Argon2 password hashing), and performed end-to-end UAT across the full stack, delivering multi-role access control, full ticket lifecycle management, priority triage, threaded comments, file attachments, paginated search/filtering, CSV export, and a complete audit trail.
- Architected a full-stack, hardware-agnostic fleet management platform end-to-end — directing AI-assisted implementation across backend, front-end, and all endpoints from a defined solution blueprint. Delivered live and historical asset tracking, organisation/site-level onboarding, driver and asset onboarding, unit configuration, and telemetry ingestion across CAN Bus and AI driver-camera data sources.
- Personally designed the platform's Global Hours of Service (GHOS) compliance module — timeline, log viewer, overview, and per-driver rule sets — architected to the same FMCSA/DOT and EU DTCO domain standard enforced as Global SME and Technical Design Authority for HOS/DTCO/ELD compliance at Powerfleet, adapted into a jurisdiction-agnostic framework to support Orion's multi-market expansion. Data handling designed around GDPR-aligned principles (data minimisation, consent management, right-to-erasure support).
- Governing IoT telemetry framework architecture including CAN Bus logic integration, software development lifecycle oversight across all delivery pipelines, and strategic management of external technical partnerships — with direct accountability for the high-scale unit rollout programme driving Orion's infrastructure transition to Tier-1 enterprise standard.

Senior Systems & Data Integration Lead | Global L3 SME & Escalation Authority · Powerfleet (Formerly MiX Telematics)

May 2018 – Oct 2025

Enterprise clients: Halliburton (NA) · Baker Hughes (NA) · LafargeHolcim (Global) · TotalEnergies (Global) · Shell (Global)

Regional Transformation & Escalation Leadership

- Elevated the North American support region from worst-ranked to #1 globally in under 12 months — within a global operation spanning 125+ countries — inheriting sole ownership of the region with no handover overlap beyond a 4-month shadow period. Achieved the transformation through forensic RCA, structured diagnostic frameworks, and daily SQL investigation. Formally recognised as instrumental by Senior VP leadership.
- Chaired the weekly NA escalation forum on behalf of the VP of Global Advanced Technical Support Services — presenting directly to a cross-functional leadership group spanning VP and C-suite executive level, US Engineering Support Management, Senior Solutions Engineering, and Product Strategy.
- Held Confluence global admin rights as one of only 3 worldwide — authored SOPs, diagnostic SQL libraries, and environment documentation that standardised L3 resolution methodology across international support teams as a de facto design authority function, independently validated by a published LinkedIn recommendation from a former Powerfleet colleague, now Product Support Engineering Team Lead at Samsara.
- Delivered weekly training sessions to US RSO 1st and 2nd Line Support teams from 2019 onwards, building self-sufficiency across the NA support organisation. Chaired weekly SLA meetings with US RSO management to drive SLA achievement across the region.

Critical Incident Response & Compliance Governance

- Sole analyst identifying DOT compliance crisis: a firmware sync malfunction on the Rovi IV Android compliance device caused false engine sync failures across 80,000+ assets. Wrote and executed the SQL diagnostic script across all NA client databases; forensic data analysis isolated the root cause, directly informing the Rovi firmware patch and subsequent Fleet Manager UI hotfix — zero vehicles grounded.

- Recalled as trusted escalation authority to co-architect the IFTA compliance report (2019/2020) after the existing production report began generating inaccurate FMCSA submissions — a live federal compliance failure. Designed the Excel import model and a 5-tier proactive classification system, quarantining compromised units before FMCSA submission. Personally verified and produced IFTA reports quarterly across 70+ NA IFTA-registered clients from 2019 to 2025 — six consecutive years of uninterrupted federal compliance production — with zero compromised submissions reaching regulators. Subsequently defined the full AWS S3 data specification and per-client folder structure, transitioning from manual CSV delivery to fully automated ingestion across 100,000+ telematics units.
- Primary L3 escalation authority for FMCSA (US) and Tachograph/DTCO (EU) compliance platforms — diagnosing root causes across 100,000+ drivers without client penalty or reporting failure.

Platform & Product Authority

- Global SME for MiX Hours of Service (HOS) — owning front-end display and the Rovi IV Android compliance device across North America, Europe, Africa, Canada, and Australia. Primary escalation authority for both Rovi II and Rovi IV implementations.
- EU DTCO specialist and escalation authority for EasyELD, MyMix, MiX Fleet Manager Mobile, and MiX Journey Management (Global). SME for MiX Vision (Global). Actively involved in the Canadian ELD implementation programme.

Data Integration & Systems Lead · DiverselT (Marconi Pharmaceutical Systems)

Feb 2016 – Apr 2018

Enterprise clients: Clicks · Dis-Chem · Parow Family Pharmacy

- Governed real-time medical aid claims processing for Clicks (36M/yr) and Dis-Chem (24M/yr), owning data flow integrity architecture across both national retail environments. Became in-house SME for the integrated Tradelink POS and back-office platform, extending its architecture into pharmaceutical and medical aid switch integration for real-time claims processing.
- On day one — first time touching the system, manager absent — independently diagnosed a novel temp-file overflow failure, engineered a CMD cleanup script on the spot, and saw it adopted directly into the next production build.
- Defined the Ledger Allocation Logic architecture governing automated classification of 5 transaction categories, eliminating manual reconciliation and ensuring 100% accuracy across debtors, creditors, and ledger layers.
- Led enterprise Johannesburg deployment across 6 stores, authoring all user documentation and installation guides for POS, back office, head office, and pharmacy systems before go-live.
- Served as QA System Testing lead, performing UAT across all software packages using SoapUI and Fiddler for automated integration testing, with full testing authority across POS, back office, medical aid switch integrations, EFT, and pharmacy systems.

Subject Matter Expert | Enterprise Data & Retail Systems · UCS Technology Services

Aug 2010 – Jan 2016

Enterprise clients: Sportsmans Warehouse · Outdoor Warehouse · Toys “R” Us · Green Cross · Sissy Boy · Big Blue

- Progressed through three formal roles — Junior Support Consultant to Product Specialist to SME — including Linux/Unisolv pharmacy support and FMCG retail POS systems from the outset, providing the cross-industry foundation carried into DiverselT. Held Shell HSSE Certification.
- Independently architected and built every XML/XSLT transformation file translating POS transaction data into the Dolfin head office platform, from initial briefing to successful first deployment — de facto integration-architecture ownership under an SME title.
- Developed production-level Firebird SQL and MySQL capability, writing queries, stored procedures, and commission/sales reporting logic deployed directly into live environments, with developer-level database rights enabling on-the-fly production fixes.
- Engineered an automated deployment framework — a CMD batch script standardising and fully automating site installations — adopted as company standard for all remote deployments and updates across 50+ enterprise retail clients.
- Designed and published the company's internal bug and defect management framework from scratch — the organisation's golden standard for development issue tracking until formally migrated into Simplicity.
- Maintained 95% SLA adherence across 150+ national retail branches as the last line of defence between helpdesk, onsite technicians, and development.

EARLY CAREER FOUNDATION

These roles form the verified technical foundation underpinning the 19-year career span and the self-taught capability trajectory carried into every subsequent role.

Support Engineer · Digicape (Apple Authorised Reseller)

Feb 2008 – Jan 2009

- Hardware and software diagnostics, repair, and data recovery on Apple systems. Responsible for all 3G connectivity, Mac software updates, and workshop fault research. Certified: Mac OS X 10.5 Support Essentials, 3G Modem Training.

Sales & Helpdesk Support Consultant · Apple iStore (V&A Waterfront)

Feb 2007 – Dec 2007

- Technical helpdesk support alongside sales at Apple's flagship Cape Town store. Certified: Mac OS X 10.4 Support Essentials, Mac OS X 10.4 Server Essentials, Mac iPhone Sales and Support Training — the foundation of the self-taught capability trajectory.

STRUCTURED ACCREDITATION PROGRAMME (OCT 2025 – MAY 2026)

Following departure from Powerfleet in October 2025, undertook a deliberate structured accreditation programme to formally certify 19 years of technical IT experience across governance, cloud, data, and AI.

Information Security & AI Governance

- ISO 27001:2022 — Information Security Management Systems (ISMS) · May 2026
- ISO/IEC 42001:2023 — AI Management System (AIMS), Advanced Level · May 2026
- Diploma in Applied Generative AI · May 2026
- AI Governance and Ethics · May 2026
- Diploma in Digital Forensic Investigation · May 2026

Data Analysis, Forensics & AI

- Diploma in Advanced SQL Server — Forensic Data Analysis & Validation · Feb 2026
- Exploring SQL Server 2016: Intermediate · Feb 2026
- Diploma in MySQL and Statistics for Data Analysis · Mar 2026
- Diploma in Using Python for Data Science · May 2026
- Mastering Windows PowerShell — Systems Diagnostics & Remediation · Mar 2026
- Azure Masterclass: Analyse Data with Azure Stream Analytics · Mar 2026
- Introduction to Azure Stream Analytics · Mar 2026
- Salesforce Developer: Introduction to Artificial Intelligence · May 2026

Cloud Architecture & Systems

- Diploma in AWS Solution Architect — Associate · Mar 2026
- Microsoft Azure Administrator · Mar 2026
- Master Microsoft 365: Essential Skills and Beyond · Mar 2026

Project Management & Delivery

- Agile Project Management · Apr 2026
- Scrum Development · Apr 2026
- Introduction to Advanced Scrum · Apr 2026
- Jira Architecture (An Introduction to JIRA Architecture) · May 2026
- Foundations of ITIL 4 for Service Management · May 2026
- Engineering Project Management · Apr 2026
